We performed the following tests on your pet during this visit:

TEST	RESULT
Thoracic Radiographs	<ol style="list-style-type: none"> Continued resolution of pleural effusion consistent with clinical diagnosis of pyothorax, suspect that residual small amount of fluid, versus pleural fibrosis only. Right middle lung lobe abscess versus granuloma with central cavitation, resolving.

Our current diagnoses for your pet are as follows:

DIAGNOSIS	COMMENTS
Resolved pyothorax	<p>Clinically, Tai is doing well with good recovery from his pyothorax, with no signs of labored breathing or discomfort.</p> <p>Radiographically his lung fields and thoracic cavity look greatly improved.</p>

Please follow these instructions for care at home:

FEEDING: Usual Diet No food tonight (water OK) Special:
 EXERCISE: No restrictions Keep quiet tonight—pet was sedated Other:

MEDICATION	SIZE/QUANTITY	INSTRUCTIONS
Clindamycin	225mg	<p>(one 150mg tablet, and one 75mg tablet) Give by mouth two times daily for 30 days.</p> <p>Clindamycin is an antibiotic with excellent activity against most pathogenic anaerobic organisms.</p> <p>Adverse effects may include gastroenteritis, vomiting, loose stools, or infrequently, bloody diarrhea. If any of these signs are noticed, please contact the VMTH.</p> <p>It is important to give the doses on a regular schedule preferably 12 hours apart. Do not skip doses. Continue administration of the drug until the entire prescription has been used.</p> <p>Incomplete or inappropriate dose regimen during antibiotic therapy may result in selection of resistant strains of the microorganisms and compromise future use of the drug.</p>

Veterinarian Report:

On 6/9/05 Tai presented for recheck following resolution of Nocardial pyothorax. On physical examination he was normal with a temperature of 100 degrees, heart rate of 72 beats per minute, and a respiratory rate of 50 breaths per minute. His respiratory character was normal with no dyspnea nor abnormal lung sounds noted. Tai is looking and acting normal. He will continue on the Clindamycin for the remainder of his 30 day prescription.

The incision sites where he had bilateral chest tubes both look good with no swelling, redness, or discharge.
